

## **Boomer Green Energy Hub**

Community Information Session - Marlborough

4-6pm Wednesday, 10 May 2023

## Acknowledgement of Country

We acknowledge the Traditional Custodians of the land upon which we meet and their continuing connection to lands, waters and communities.

We pay our respects to Elders past and present.

#### Introductions

#### Ark Energy

- Anthony Russo, GM Development, Queensland
- Jessica Picton, Snr Project Manager
- Melissa Pisani, Community Engagement & Stakeholder Relations

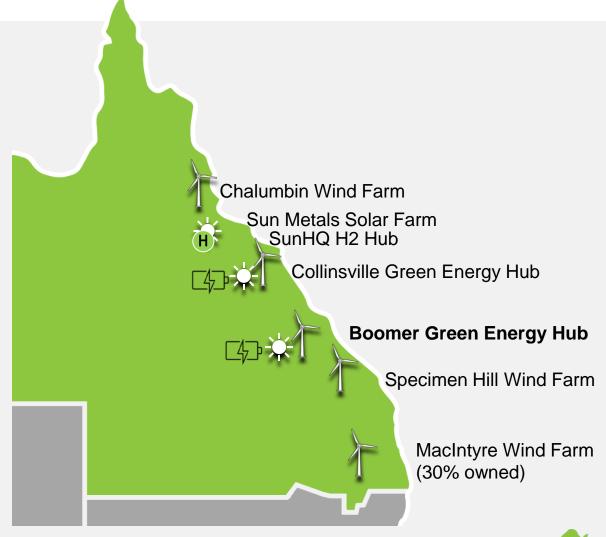

#### **Specialist Consultants**

- Chris Cantwell, Partner, Attexo Environmental Planning
- Ian Crombie, Senior Consultant, Attexo Landholder Engagement
- Patrice Brown, Director, CQG Community Engagement

## Ark Energy

- Specialising in greenfield utility-scale wind, solar and hydrogen. 20+ years experience, 13 projects in development.
- 25-year history in Qld through sister company Sun Metals - zinc refinery and solar farm.
- Mandate to decarbonise energy supply of parent company, Korea Zinc, and help third-party customers accelerate their energy transition.
- Korea Zinc is the first major refiner to join RE100 and commit to powering global operations from 100% clean energy by 2050.

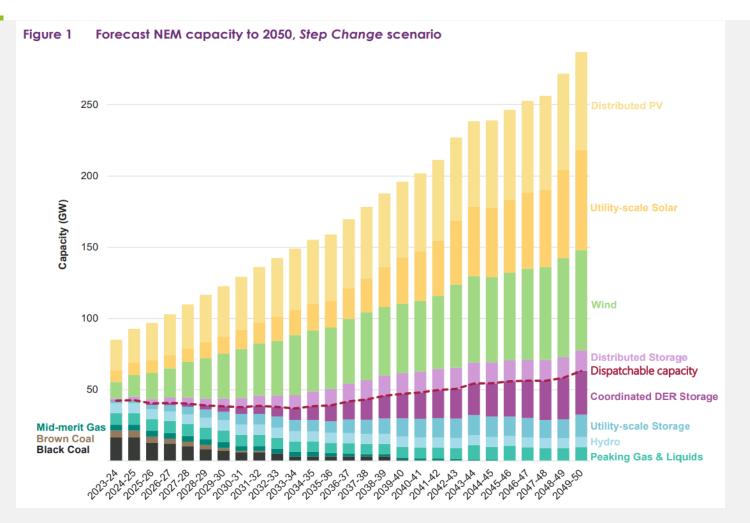

#### Why renewables? Energy transition

Australian Energy Market Operator's 2022 Integrated System Plan *Step-change scenario*, by 2050:

- Electricity demand to double
- Coal retired 2-3 times faster
- Nine-fold increase in grid scale wind and solar required; incl. 50 GW from Qld.

#### National targets

- 82% RE in NEM by 2030.
- Emissions reduction 43% by 2030, net zero by 2050.
- 2022 = 36%.

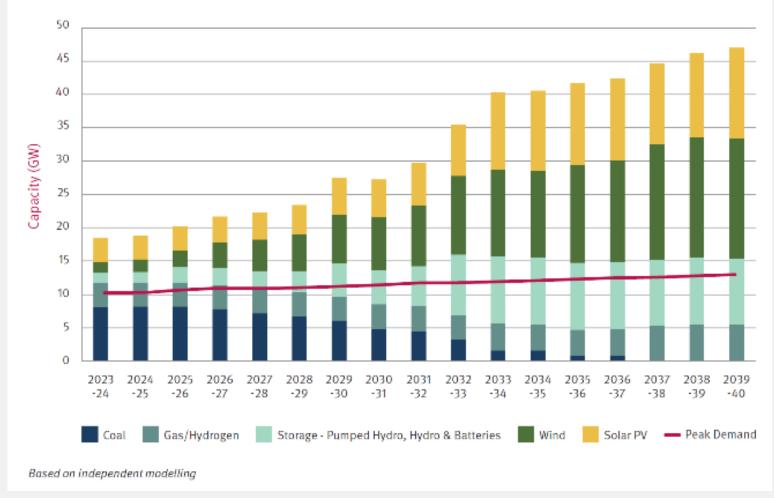

Source: AEMO ISP 2022

## Why renewables? Energy transition

# Queensland renewable energy targets:

- 70% by 2032
- 80% by 2035 incl. 25
  GW of large-scale wind and solar.
- Net zero by 2050.
- 2022 = 23%

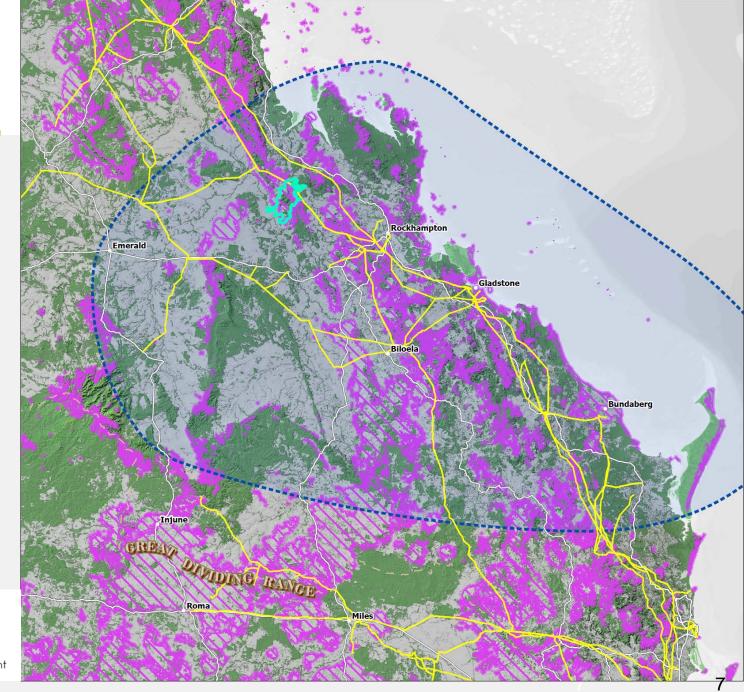

Source: Queensland Energy and Jobs Plan

## Challenge

- Wind resource located along the Great Dividing Range ridgelines
- Overlap with vegetation
- Vegetation = habitat

#### Site selection

Candidate Central Queensland Renewable Energy Zone

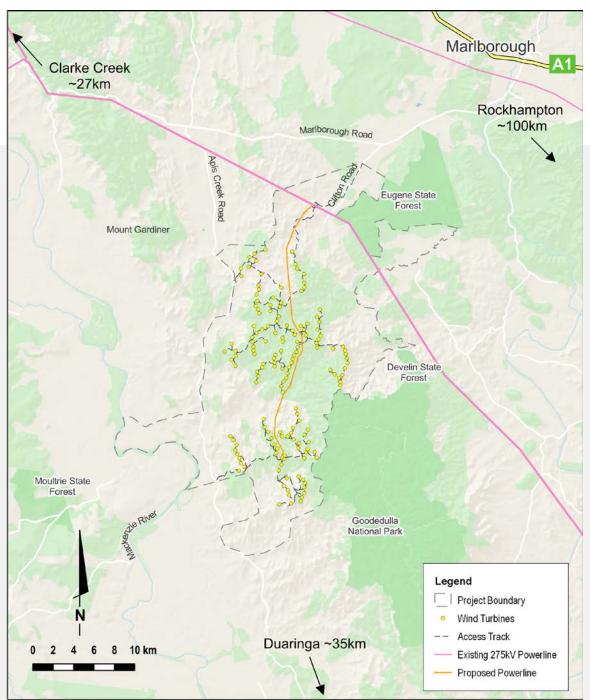

Economic resource

Grid connection - two Powerlink 275kV transmission lines.

Land tenure - cattle grazing properties, ~30 km south-west of Marlborough.

#### Boomer Green Energy Hub

~150 turbines with capacity for ~1GW

Potential solar opportunity of >500MWac

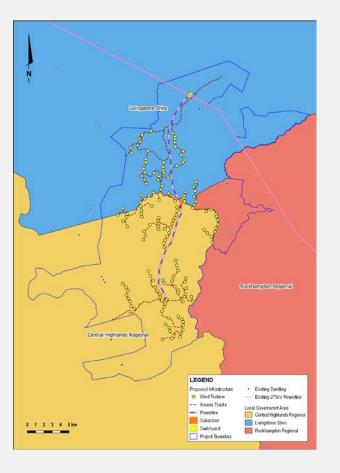

BESS opportunity of 2GW/4WGh modelled

Develop to own, build and operate.

#### Three LGAs:

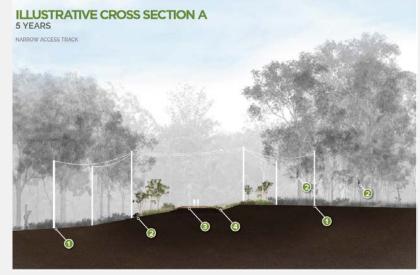

- Livingstone Shire Council
- Rockhampton Regional Council
- Central Highlands Regional Council

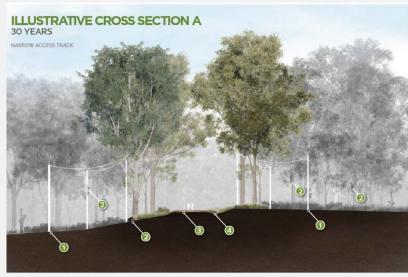

#### Environmentally responsible development

- Maximum extent achievable: avoid, minimise, mitigate.
- Consult with ecology stakeholders identify key concerns, workshop solutions.
- Collaborate consultants, specialists, cross-functional teams.
- Find workable compromises with meaningful benefit.
- Invest and collaborate on strategies and commitments for repair i.e. rehabilitation.
- Strategic, generous environmental offsets with active management regimes - weed, fire, feral pest control - to improve habitat values.
- Opportunity and focus: net positive outcomes

#### State and local government assessment

- Wind component assessed State Assessment and Referral Agency (SARA) under State code 23 – wind farm development.
- Solar component assessed by Local Government under Planning Scheme.
- Rigorous technical studies and assessments, and preliminary management plans, including for:
  - Ecology, environmental offsets, rehabilitation.
  - Landscape and visual amenity
  - Electromagnetic interference
  - Aviation operations
  - Noise and shadow flicker
  - Traffic and transport
  - Stormwater management, erosion and sediment control

#### Commonwealth assessment: EPBC Act

- Department of Climate Change, the Energy, Environment and Water Environment Conservation and Biodiversity Conservation Act 1999
- Referral September 2022 considered footprint of ~2,000 ha with preliminary ecology findings of potential impact on habitat types for:
  - Koala 34 ha refuge, 891 ha general.
  - Greater glider 59 ha denning, 179 ha foraging.
  - Squatter pigeon 576 ha breeding, 333 ha foraging.
- Determined controlled action with assessment by Environmental Impact Statement (EIS):
  - EIS based on guidelines, due soon, and process involves public exhibition.
  - As results of the ecology work become available they will be communicated and the project design will be refined.
- Documentation available on the EPBC Act Public Portal (EPBC No 2022/09396).

#### Status

- Resource monitoring
- Civil and electrical design
- Ecological assessment:
  - Ground-truthing of desktop vegetation mapping.
  - First year of on-site seasonal surveys by ecologist teams (Autumn, Spring).
  - Cameras, spotlighting, bird and bat surveys, reptiles.
- Engagement:
  - Traditional Owners, Barada Kabalbara Yetimarala Peoples.
  - Community
  - Other key stakeholders (ecology)

#### Component examples (wind)

Access tracks: 5.5m crest width; wider toe width required for cut / fill batters; drainage and erosion control; buried cabling.

Tower foundations: ~800m³ concrete.

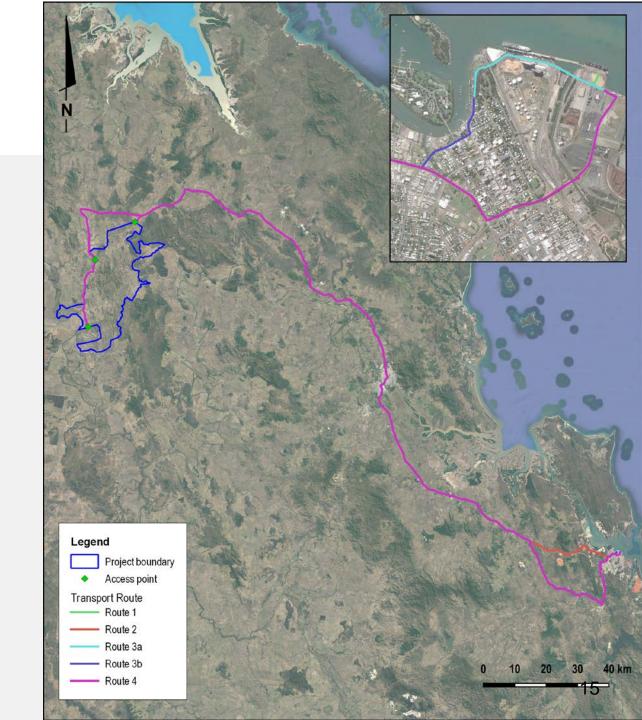

Hardstands - crane assist pad, high / large equipment; laydown area (blades, tower, nacelle etc.); 1.5 -2 ha per turbine.

Substations - wind farm collector to link turbines across site; low voltage to high voltage connection; potential for battery storage to support grid connection; 2 ha each.

#### Transport route

- Transportation via Port of Gladstone or Port of Mackay under assessment.
- Port of Gladstone accommodating current wind farm projects.
- Larger components (longer than 89m) may be transported via Duaringa.

## Community engagement

- Guided by best practice and International Association for Public Participation (IAP2).
- Signatory to the Clean Energy Council's Best Practice Charter for Renewable Energy Projects.
- Open, accessible, transparent.

#### Focused on:

- Providing opportunities for interested community members and stakeholders to participate.
- Maximising opportunities for the local/regional community to benefit in meaningful ways.

# BEST PRACTICE CHARTER FOR RENEWABLE ENERGY PROJECTS

We commit to honouring the Clean Energy Council's Best Practice Charter in our renewable energy projects and

- We will angage respectfully with the local community, including Traditional Owners of the We will engage respectfully with the local community, including Traditional Owners of the land, to seek their views and input before submitting a development application and finalising
- We will provide timely information and be accessible and responsive in addressing the local community's feedback and concerns throughout the life of the project.
- We will be sensitive to areas of high biodiversity, cultural and landscape value in the
- We will minimise the impacts on highly productive agricultural land and explore opportunities
- We will consult the community on the potential visual, noise, traffic and other impacts of the project, and on the mitigation options.
- We will support the local economy by providing local employment and procurement
- We will offer communities the opportunity to share in the benefits of the project, and We will offer communities the opportunity to snare in the benefits or the project, each consult them on the options available, including relevant governance arrangements.
- commit to using the project to support educational and tourism opportunities
- We will demonstrate responsible land stewardship over the life of the project and welcome We will demonstrate responsible land stewardship over the life of the project and while opportunities to enhance the ecological, cultural and/or agricutural value of the land During the life of the project, we will recycle waste materials where feasible and commi

# During the life of the project, we will recycle waste materials where reasible and commit to responsible decommissioning or refurbishment/repowering of the site at the end of the

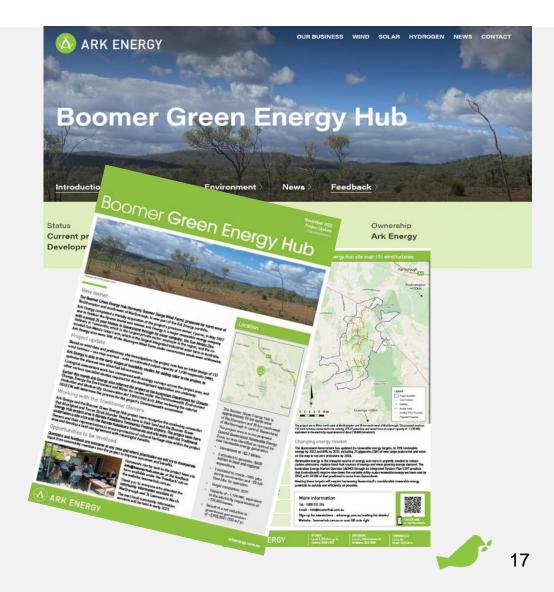

Chief Executive Officer Ark Energy Corporation Signatory since October 2022

#### Information, questions, feedback

- Website with feedback form: www.boomerhub.com.au
- Newsletters email and mail.
- Briefings / meetings.
- Anytime <u>info@boomerhub.com.au</u> and 1800 731 296.
- Information sessions at key points.
- Project information centre Rockhampton.
- Community Consultative Group.

#### Summary - key points

- Investment of ~\$3.5 billion.
- Generate >\$600M in local and regional expenditure.
- 350+ jobs during construction and ~20 full time jobs during operation.
- Capacity of up to 1,100 MW clean energy reduce carbon emissions and put downward pressure on electricity prices.
- Community benefit program from start of construction and for the life of the project.
- Reduction in greenhouse gas emissions of 1,200,000 t CO2-e / yr. Life cycle analysis indicates net positive after 1.7 years of operation (including component manufacture, construction and clearing).
- Opportunity of net gains for key species and biodiversity in the area.

#### Next steps

- Resource monitoring ongoing
- Environmental assessment work
- Cultural heritage work and ongoing engagement with Traditional Owners.
- Ongoing engagement with local community and stakeholders
- Open information centre, Rockhampton.
- Form Community Consultative Group
- Civil and electrical design
- Geotechnical studies
- Progress grid connection

- Lodge DA (State): 2023
- EIS Process (Cmwlth): 2023 2024

# Questions & discussion

# Thank you
